SAMPLE IMAGE CAMERA AND MULTIPLE SAMPLE TESTING

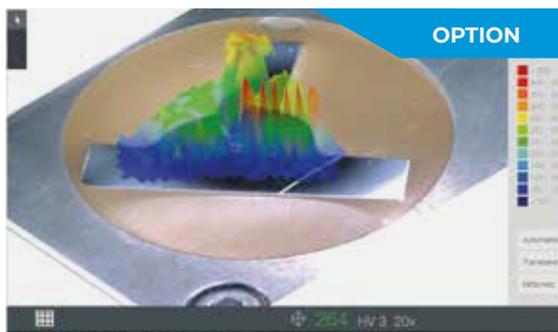

SAMPLE IMAGE CAMERA

Ultimate operating comfort provided by the USB 3.0 - 5 MP color camera system for capturing the whole sample and the perfect overview in test protocols

MULTIPLE SAMPLE TESTING AND MULTI-BEDDING

With usage of Qness sample holders CHD Master+ variants enable tests on up to 8 embedded samples at a time – even in case several test pieces are embedded in one specimen.

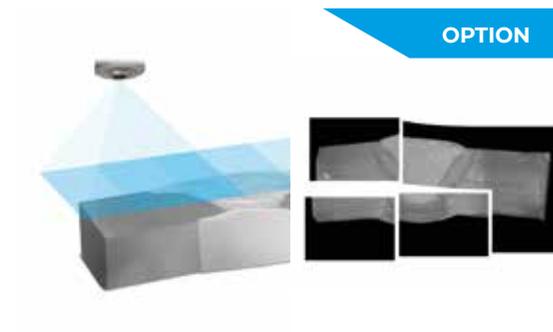

2D/3D MAPPING

Hardness distribution across partial segments or whole planes of test samples. Colourized representation in 2D and perspective free twistable 3D on sample image.

EDGE RECOGNITION

The function of the Qness software module Edge recognition is the automatic adaption of test row start points to the sample edge when using project and sample templates. The module increases the machines automation and is the perfect add-on feature to the standardized AutoSnap function.

FROM CHD TO WELDING SAMPLES

Further to quick and simple CHD/NHD/SHD testing which the machine is basically designed for, it is optional also possible to upgrade the machine with features for welding samples and visual test point patterns for extra-large work pieces.
